

Rochford Ward Respiratory Changes

Description

We've had a calm, comforting but highly practical and user friendly clinical area created.

The scheme was well designed and colour blended – this means the environment is bright, airy to work in and with good facilities. It is appreciated by the patients and staff alike that are using it.

The enhancements to the medical gases and the environmental controls have made it a highly specified work place fitting the high dependency patients that we care for.

The project was inclusive of the end users and our feedback was sought throughout to ensure that we attained what we needed

Anne Groome Ward Manager
